

Decatur County Memorial Hospital provides patients with the best available mammograms in the southeastern Indiana area through our new digital mammography system.

The Mammomat Novation system increases cancer detection rates and reduces radiation by more than 50%. Our advanced system also will sense the thickness of the breast to allow for a more comfortable compression and allows for the use of a Mammopad. Mammopads are a soft, comfortable pad that is placed between the breast and the mammography unit. This allows for a less painful and more comfortable mammography system.
