

## Prevention and Treatment Services

- **Pre-Employment Physicals:** Our Nurse Practitioners provide standardized physical assessments of potential employees based on job description. This allows for a more effective hiring process, potentially reducing employee turnover and increased productivity.
- **DOT Physicals:** Our Nurse Practitioners are certified to perform DOT physicals to ensure medical clearance to safely operate a CMV.
- **Forklift Physicals:** With a similar approach to the physicals required by DOT, these are performed to ensure safe operation of equipment.
- **Respirator with Spirometry Physicals:** Workers who are required to use a respirator must be physically able to perform their job while wearing one. Our team is NIOSH certified for spirometry and respirator testing. We will determine the health and physical ability of your team to use a respirator.
- **Return to Work Physicals:** This exam can ensure it is safe for your employee to return to work following an injury or surgery.
- **Fit Testing:** If your employees are required to use a respirator, they must be fit tested before using the respirator. Our team will ensure a proper fit of the respirator mask.
- **Audio Testing:** Do you require a hearing conservation program? Our team can help with baseline and annual audio screenings. Our staff are CAOHC certified in hearing conservation.
- **Illness & Injury Care:** Not all workplace injuries are avoidable. Our team can provide you with prompt treatment and return to work status. We ensure appropriate evaluation of injured workers, maintaining proper communication and understanding of the injured employee's status.
